

VETERINARY CLOUD-TO-CLOUD INTEGRATION

TWO CLOUDS - MANY ADVANTAGES

When two cloud-based veterinary solution experts join forces, physicians and their customers are able to reap the benefits. The combined technology of IMAGE Information Systems and ezyVet brings major improvements to all stakeholders involved in the veterinary medical imaging process. The cloud-based PACS solution allows for seamless digital study and report sharing, saving practices time and money.

Entirely digital

Faster workflow by direct study orders from ezyVet

No printing and development costs

Data consistency by using DICOM modality worklist

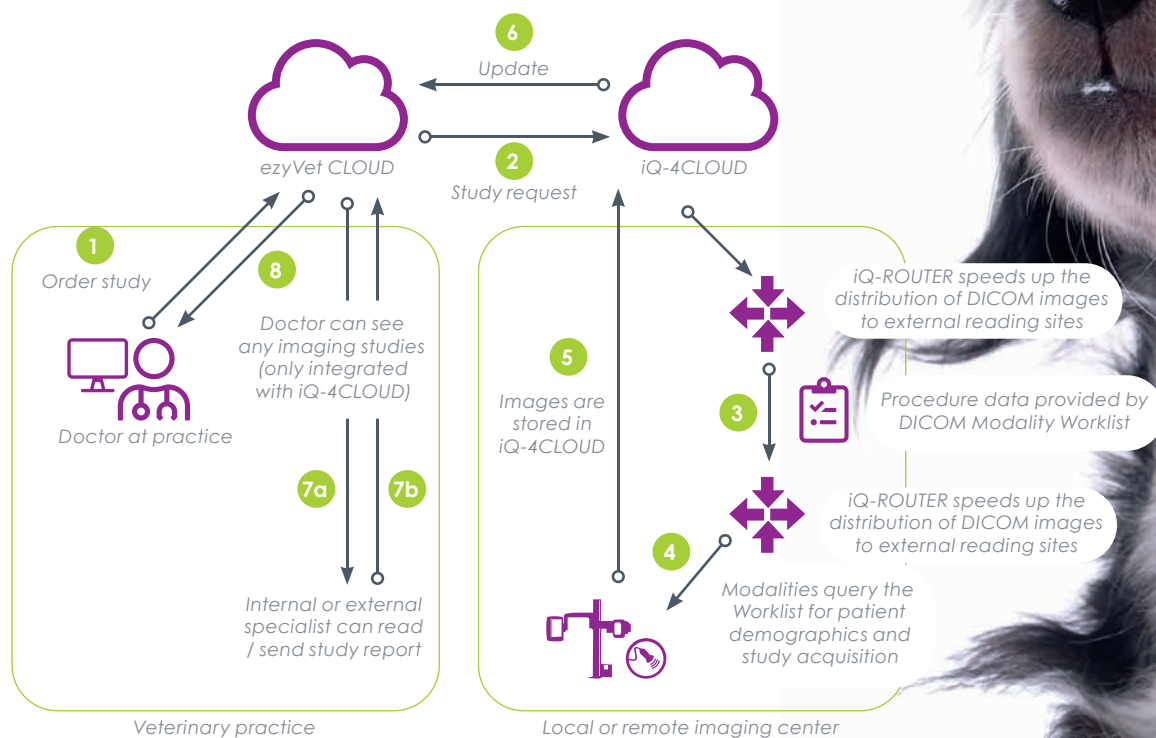

Direct PACS result integration with ezyVet

Key images in ezyVet patient record

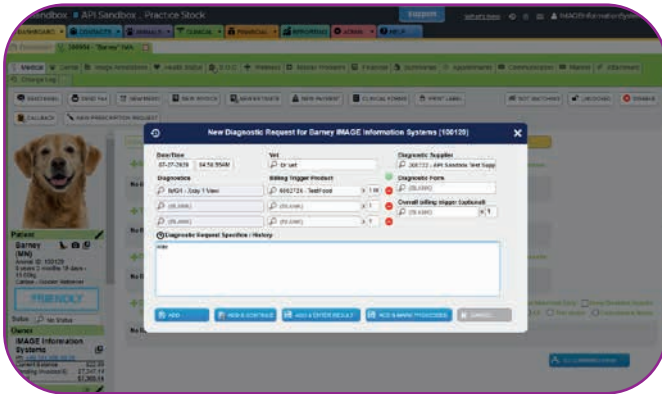

Workflow of CLOUD-to-CLOUD integration

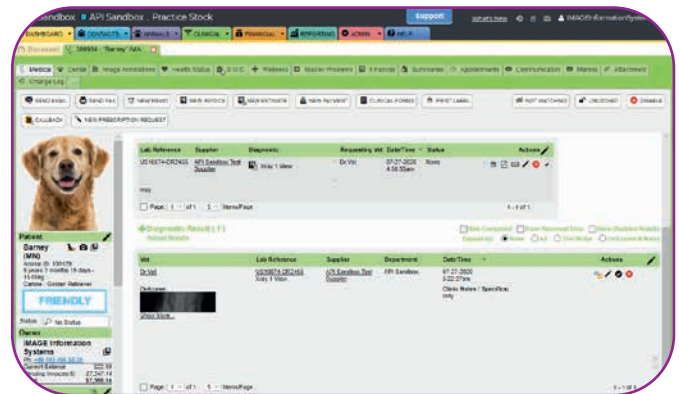

VETERINARY CLOUD-TO-CLOUD INTEGRATION

Help your staff streamline workflows and save time from double handling and manual tasks. Doctors and medical assistants will no longer need to re-enter patient data or transfer radiological images, thus avoiding associated sources of errors. The fully digital workflow ensures data consistency by entering the data only once into a DICOM worklist and allows users to view the studies anytime, anywhere.

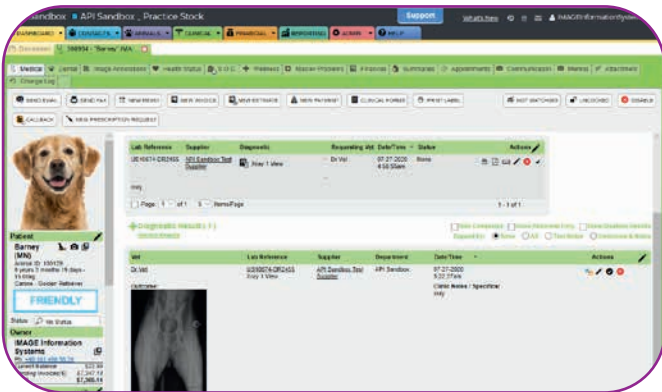

The following screenshots are numbered according to the respective steps shown in the "Workflow of CLOUD-to-CLOUD integration" on the first page.

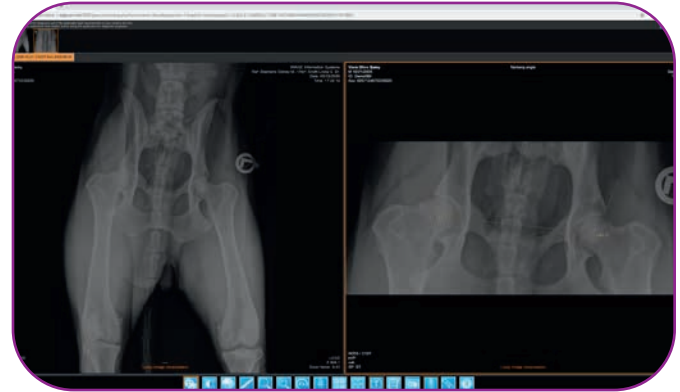

1. Enter diagnostic study request in ezyVet.

6. Study results from iQ-4CLOUD will be transparently and automatically sent to ezyVet.

8. Veterinarian can view imaging studies and results directly in the ezyVet EMR.

8. For example: Imaging result that was seamlessly opened in iQ-4VIEW from ezyVet.
